

Equivalent Fractions, Decimals and Percentages

1a. Alisha is finding equivalence between fractions, decimals and percentages.

7% is equivalent to seven tenths and 0.7.

Is Alisha correct?
Convince me.

1b. Lucas is finding equivalence between fractions, decimals and percentages.

0.375 is equivalent to three eighths and 37.5%.

Is Lucas correct?
Convince me.

R

R

2a. On a Maths test, Emily's mark was 70%.

Harry got $\frac{3}{5}$ of his answers correct.

Shenaya scored higher than Harry but lower than Emily.

What could Shenaya's score be?
Find three possibilities.
Express each one as a decimal with no more than two decimal places.

2b. On an English test, Niamh's mark was 0.8.

Kaif got $\frac{19}{20}$ of her answers correct.

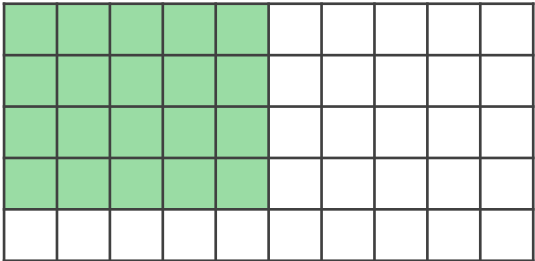

James scored higher than Niamh but lower than Kaif.

What could James' score be?
Find three possibilities.
Express each one as a percentage that is a whole number.

3a. Three children explore a diagram.

Manar thinks that 20% is shaded.
Theo thinks that $\frac{2}{5}$ is shaded.
Jasmine thinks that 0.3 is shaded.

Who is correct?
Explain your reasoning.

3b. Three children explore a diagram.

Celestyna thinks that 12.5% is shaded.
Aidan thinks that $\frac{24}{200}$ is shaded.
Zach thinks that 0.12 is shaded.

Who is correct?
Explain your reasoning.
